

4 Loop Center Bow

Supplies Used

- Offray Double Face Satin, 48 inches length
- 8 inch length of 26 gauge paddle wire

Designer's Quick Tip

If you find your loops are uneven from left to right, gently pull the shorter loop to match the length of the adjacent loop. No need to retie.

- 1** Hold the cut ribbon about 8 inches from the end with your left hand. Pinch and twist the ribbon forming a small loop, securing it between your thumb and index finger.

- 2** On the right, make a small loop, then pinch and twist. Do exactly the same on the left. Continue making 2 more loops on either side slightly larger than the first two loops, ending with the working end on the right side.

- 3** Using the 8 inches of cut wire, feed wire from the top of the bow through the loop, wrapping the wire around to the back of the bow. Twist the wire tight to secure.

- 4** Once secure, cut the ends diagonally and secure your bow to your design.
