

Asymmetrical Pick Bow

Supplies Used

- Offray Double Face Satin, 48 inches length
- A wired 6 inch wooden floral pick

Designer's Quick Tip

Use a 26 gauge paddle wire to secure the looped ribbon to the pick for a tighter and more stable bow.

- 1** Hold the ribbon about 8 inches from the end with your left hand. Pinch and twist the ribbon forming a 2.5 inch loop, securely. Then make a larger loop the same way. The working end will now be on your right side.

- 2** Bring the ribbon up behind the last loop, forming a larger loop. Pinch and twist securely. Continue stacking two more loops slightly larger than the first loops, ending with the working end behind all of your stacked loops.

- 3** Using the wooden floral pick, feed wire from the top through the loop, wrapping around to the back of the stacked loops. Twist the wire tight to secure.

- 4** Cut the ends diagonally and secure the bow pick to your design.
