

Shoestring Bow

Supplies Used

- Offray Double Face Satin, 36 inches length
- A wired 6 inch wooden floral pick (optional)

Designer's Quick Tip

Use a lighter gauge wire to secure the bow to a floral arrangement.

- 1** Hold the cut ribbon and form two equal loops. Keep the tails toward you in the front, one on each side of the center, leaving about a 5 inch space between the two loops.

- 2** Cross the right loop over the left loop forming a circle in which to insert right loop.

- 3** After inserting the loop, grab both loops with your thumbs and index fingers and pull. Arrange the tails and adjust the size of the loops using the tails to make them even.

- 4** Once the loops are adjusted to the proper size, pull both loops tightly and evenly to secure the bow, cutting the ends diagonally. Lace wire through the back of the knot to secure on your design or use a floral pick.
